

Installation Instructions for *iSTRDYN*©

Local Version

The local version of *iSTRDYN* will install on a computer or network. The install program will ask for the names of the client and server computers, so have this information available prior to starting the installation.

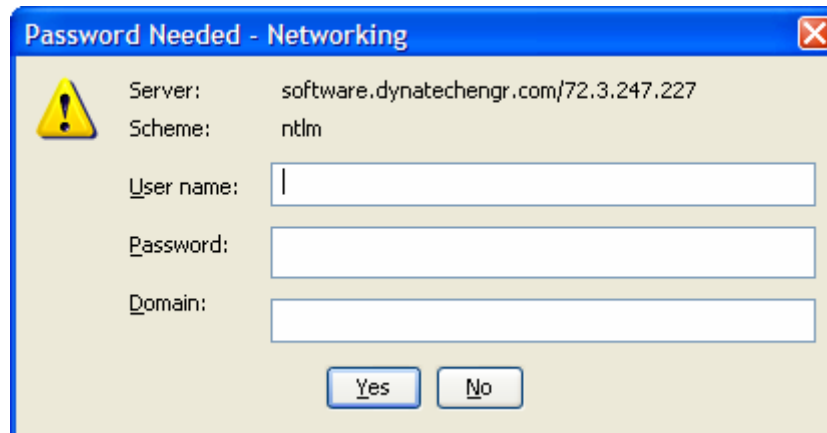

Installation Instructions for *iSTRDYN*©

Remote Version

The remote version of *iSTRDYN* installs a client program via Java Web Start. When the user runs an analysis, the client program connects to a managed server and uploads the model data over a secure connection. The server runs the analysis and the client program downloads the results. After the analysis is complete, the model and results are deleted from the server.

Installation Instructions

- 1) *iSTRDYN* requires the most recent version of Java. To be sure you have it, click [here](#) and go through the installation process. If you already have the most recent Java version, the installation process will not corrupt anything on your computer .
- 2) Obtain a Username and Password by [contacting](#) DynaTech Software.
- 3) Click [here](#) to launch *iSTRDYN*. You will see a Java icon appear in the middle of your screen, followed by the start of the download, and then the following dialog box:

- 4) Enter the Username and Password provided into the dialog box. Leave the domain field blank.
- 5) Wait for Java Web Start to download *iSTRDYN*. It may take several minutes depending on your connection speed. During this time, Java Web Start is placing the necessary program modules on your client.
- 6) There will be three security dialogs. Check the “Always trust content from this publisher” box and hit the “Run” button. This will start the client and connect to the server.
